Adventures in Chemistry & Physics

**Chemistry, Physics...sounds too
difficult, right?**

We can change your mind!

This program will spark the interest of all students and adults in science. Our goal is to encourage students to be curious about science, entertain new ideas, and try experimenting.

We hope students will learn how important reading, writing, and math skills are in the study of science. Our program can be tailored to appeal to any age group and can be designed to cover specific topics in chemistry and physics. Students can observe demonstrations and even participate in the show. Hands-on experiments can be arranged for groups of 10-15 people with prior notice.

Please allow a minimum of 1 hour for the show, but we can accommodate longer shows, depending on your students interests.
